

Do You Want to Get it *Right*?

Ensure the 5 Rights of Medication Administration

Use the **iMAR Electronic MAR System** to

- Guide critical med pass functions
- Prevent medication errors
- Update electronic MARs and ensure high quality of care

iMAR manages meds from a typical med cart equipped with a bar-code scanner, touch-screen monitor and an indestructible, liquid-proof keyboard.

To ensure accuracy, **iMAR**

- Identifies each resident by a photo on the medication screen
- Warns you if:
 - You select the wrong med
 - You about to give a med at the wrong time
 - The resident is allergic to the med
 - The med will interact adversely with other meds
- Displays:
 - Pending medications
 - Meds about to be late
 - Late meds

iMAR interfaces to the pharmacy for easy re-ordering.

When you receive the meds, check them into the system using the bar code scanner.

iMAR interfaces to the Hi-Tech Clinical Record System to complete the MDS Section U and to provide medication information for Quality Assurance reporting.

- ☑ Right Resident
- ☑ Right Medication
- ☑ Right Dose
- ☑ Right Route
- ☑ Right Time
